TARGET ACQUISITION SYSTEM ARTS

SURVEILLANCE AND TARGET ACQUISITION

C4ISR

LPP ARTS is a target acquisition system for artillery observers. It displays real-time target data, interactive map layers, and waypoints. Users can view friendly and enemy positions, manage targets, and access ballistic tables and weapon presets. The system utilises optoelectronic sensors to show shooter and target locations, supports hit evaluation with live or recorded data, and automatically calculates fire corrections.

MAIN FEATURES

- + Enables advanced surveillance and target acquisition by integrating multiple data sources to support fire missions.
- + Processes target acquisition, meteorological, weapon type, ammunition characteristic, and ballistic table data.
- + Displays interactive map layers and waypoints for fire navigation, and position markers for friendly and enemy units.
- + Optoelectronic locator unit MSB-8 integration enables real-time situational awareness.
- + Integrates with other C2/C4 systems, such as blue forces tracking and logistics systems.
